

**Prodotti realizzati utilizzando le presse piegatrici orizzontali SIMASV®**  
**Products realized working with SIMASV® horizontal bending presses**

## PRESSE PIEGATRICI ORIZZONTALI

### MIGLIORA IL TUO LAVORO CON UNA PRESSA PIEGATRICE ORIZZONTALE SIMASV®

Avete la necessità di ottenere dei particolari diversi, accurati anche con materiali "difficili", da applicare a strutture complesse?

La soluzione è semplice: basta affidarsi ad una pressa piegatrice idraulica orizzontale SIMASV®!

#### SOLIDITA'

Le presse piegatrici idrauliche orizzontali SIMASV® si distinguono innanzitutto per la solidità complessiva della struttura, essenzialmente data da:

- una rigida struttura monoblocco
- un carrello molto robusto su guide interne solide e rigide
- perni in acciaio speciale con inserto conico a gioco "0" per eliminare ogni flessione
- adeguate protezioni da caduta pezzi o materiali in collisione

La struttura delle presse SIMASV® **non flette** durante le lavorazioni assicurando un risultato di alta precisione e grande cura.

#### PRECISIONE

I modelli dotati di controllo CN (serie DIGIT) supportano l'operatore nell'impostazione della più stringente accuratezza millimetrica ed infinita ripetibilità.

Le stesse innumerevoli attrezzature, in dotazione e optional, oltre ad avere una grande robustezza, consentono un'ampia varietà di lavorazioni con un'unica pressapiegatrice.

Basti pensare alla possibilità di installare un sistema a punzonare e/o una curvatrice a due posizioni con comando indipendente:

- per lavorare tubi e profili tondi, per arricciare e attorcigliare
- per ottenere curvature di grandi raggi e profili speciali.

#### VERSATILITA'

Garantendo la qualità e l'intercambiabilità delle attrezzature, una pressa piegatrice SIMASV® rappresenta un investimento duraturo nel tempo e proficuo per la vostra attività.

#### PROFESSIONALITA'

La rete di vendita SIMASV®, formata da personale commerciale e tecnico scelto, vi guida professionalmente nella scelta del macchinario e del corredo di attrezzature adatte alle vostre necessità di lavorazione.

S.I.M.A.S.V. è inoltre in grado di risolvere le problematiche particolari di lavorazione che vorrete sottoporre fornendo attrezzature e macchinari speciali progettati e fabbricati on demand.

Per maggiori informazioni potete pertanto:

- contattare il Vostro rivenditore di fiducia oppure
- rivolgervi direttamente al costruttore S.I.M.A.S.V.  
mailto: marketing@simasv.it.

## BREVETTI

### Dispositivo di bloccaggio rapido dei perni conici portapunzoni e portamatrici con punzoni e matrici intercambiabili nelle pressepiegatrici orizzontali

L'invenzione riguarda un dispositivo di bloccaggio rapido dei perni conici portapunzoni e portamatrici con punzoni e matrici intercambiabili che consente di ridurre sensibilmente il tempo necessario per la sostituzione di detti utensili sulle presse orizzontali fornendo nel contempo la massima sicurezza nell'uso della macchina

## HORIZONTAL BENDING PRESSES

### IMPROVE YOUR WORK WITH A SIMASV® HORIZONTAL BENDING PRESS

Do you need to get different and accurate metal pieces, to be applied to complex structures, even if you use hard material?

The solution is simple: you only need to rely on a SIMASV® horizontal hydraulic bending press!

#### SOLIDITY

SIMASV® hydraulic horizontal bending presses distinguish themselves for the overall solidity of their structure, featured by:

- a rigid monobloc structure
- a very solid carriage on solid and hard internal slides
- special steel pins with conical insert with clearance "0" eliminating every flexion
- suitable protections against fall of materials or materials in collision

The structure of SIMASV® bending presses **does not flex** during the working process and therefore ensures highly precise and accurate results.

#### PRECISION

CN models (DIGIT series) help the operators in setting the most millimetric strict accuracy and endless repeatability.

The same great number of tools, standard or optional, besides being very durable, allows a wide range of metal workings with a single bending press. Just consider the possibility of mounting a punching unit and/or a two-position ring roller system with independent control:

- for making the traditional round tubes and profiles and to curl and twist
- for large radius bending and special profiles.

#### VERSATILITY

Since it guarantees the quality and the interchangeability of the working tools, a SIMASV® bending press represents a profitable and long lasting investment for your business.

#### PROFESSIONALISM

SIMASV® sale network, composed by selected sale and technical people, can assist you with professionalism in the choice of the most suitable machine-tool and the relevant equipment.

S.I.M.A.S.V. can also solve the peculiar metalworking problems you would like to draw to our attention, by supplying toolings and special machines, designed and manufactured on demand.

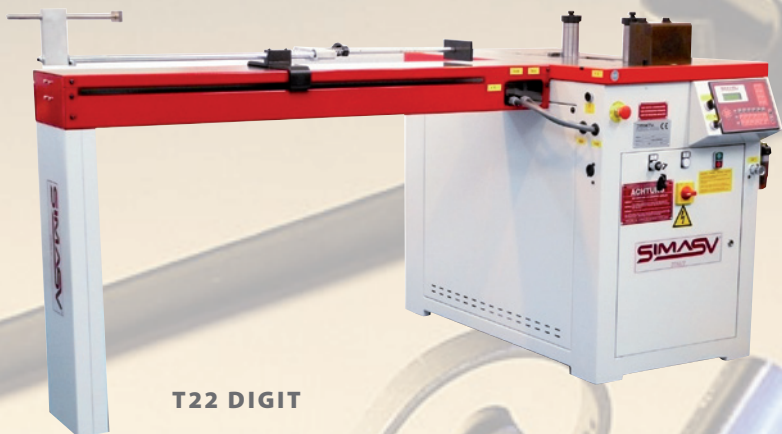

For further information you are welcome

- to get in touch with your local supplier or
- to contact directly the manufacturing company S.I.M.A.S.V.  
mailto: marketing@simasv.it

## PATENTS

### Punch- and die-carrier conical pin rapid locking device with interchangeable punches and dies in bending machines

A punch- and die-carrier conical pin rapid locking device with interchangeable punches and dies, considerably reducing the substitution time of these bending press tools, while providing the greatest level of safety in the use of the machine
